DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 25, 30-33, 39-44, drawn to a method for generating genetically diverse plants via the incorporation of exogenous microsatellite sequence into the plant genome of the same species.

Group II, claim(s) 26 and 28, drawn to method of Group I, wherein MS-like DNA fragment comprises a monotonous repeat of one to six nucleotides and is at least twelve nucleotides in length.

Group III, claim(s) 27 and 29, drawn to the method of Group I, wherein MS-like DNA fragment comprises a sequence that is at least 70% homologous to a monotonous repeat of one to six nucleotides and is at least twelve nucleotides in length.

Group IV, claim(s) 34, drawn to the method of Group I, wherein MS-like DNA fragment further comprises in tandem a unique identifiable sequence that enables specific tagging of the incorporated DNA.

Application/Control Number: 10/550,870

Art Unit: 1638

Group V, claim(s) 35-36, drawn to the method of Group I, wherein the MS-like DNA is introduced into individual cells.

Group VII, claim(s) 37-38, drawn to the method of Group I, wherein the MS-like DNA is introduced into any one of a plant embryo, tissue or callus or a leaf.

Group VIII, claim(s) 45-48, drawn to a method for generating genetically diverse plants via the incorporation of exogenous microsatellite sequence into the plant genome.

The inventions listed as Groups I-VIII do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

The technical feature linking the inventions of Groups I-VIII is a method for generating genetically diverse plants via the incorporation of exogenous microsatellite sequence into the plant genome of the same species. However, this method is anticipated by LeClere et al (2001 Plant Molecular Biology 46:695-703). LeClere et al. teach that cDNAs of Arabidopsis with oligo (dT) were generated and the binary vectors containing the cDNA library were transformed into Arabidopsis (abstract; Figure 1; also the paragraph bridging pages 697-698). Transgenic lines were selected and the transgenic plants were further screened for morphological and pigmentation alteration (page 699, 2nd paragraph of the right column). Given that the cDNA with oligo dT meets

Application/Control Number: 10/550,870

Art Unit: 1638

the definition of MS-like DNA fragment by comprising a monotonous repeat of one to six nucleotides and being at least twelve nucleotides in length, the reference anticipates the method of claim 1. Therefore this technical feature does not constitute a special technical feature as defined by PCT Rule 13.2, because it does not define a contribution over the prior art.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Li Zheng whose telephone number is 571-272-8031. The examiner can normally be reached on Monday through Friday 9:00 AM - 5:30 PM EST.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Anne Marie Grunberg can be reached on 571-272-0975. The fax phone
